

Comment Form

Give Us Your Input!

Public input from thousands of Californians has already helped shape the CALFED Bay-Delta solution. However, there are many significant issues that still need to be decided. Please fill out this form and tell us what you think is important when developing an equitable, feasible and durable Bay-Delta solution.

Comments:

I made a written comment at the Costa Mesa hearing, however I feel that I must make some additional comments. Several of those speaking at the hearing express the opinion that No new dams or Surface Storage Should be Considered. I feel that this is very impractical not to include these options. The Variable rainfall in regard to amount and time during the year and from year to year makes the need for dams and storage very important. The concept of underground water storage is good however there must be a way to allow the water during high flow periods to sink into the ground. If dams and surface storage are not used then vast areas of productive land would be required to allow water to sink in and the uses of land for other functions.

Use additional sheets if necessary.

Would he last
